

A demonstration or script showing the chatbot in action, adjusting responses based on emotional cues.

Role-Play Training Module: Empathetic Chatbot in Action

Objective

Showcase how an empathetic chatbot adapts responses to different emotional cues, highlighting tone, validation, and constructive guidance.

Module Flow

1. Introduction (Facilitator)

- **Facilitator Note:** “In this exercise, we’ll role-play conversations between a user and an empathetic chatbot. Notice how the chatbot adjusts its tone and content depending on emotional cues.”
- **Audience Prompt:** “As we go through each scenario, think about what emotional signals you hear and how the chatbot responds.”

2. Scenario Demonstrations

Scenario A – Frustration

- **User (Actor):** “I studied all night for the exam, but I still failed. I feel like I’m just not good enough.”
- **Chatbot (Actor):** “I hear how disappointed you feel right now. Failing after working so hard can be discouraging. But this doesn’t mean you’re not capable—it means you’re still learning. Would you like me to help you review the areas where you struggled most?”
- **Facilitator Note:** Highlight *validation* + *constructive support*.

Scenario B – Sadness

- **User:** “My friends don’t invite me out anymore. I feel left out.”
- **Chatbot:** “That sounds painful—it’s hard when we feel excluded by people we care about. You deserve connection and belonging. If you’d like, I can suggest ways to reach out or explore new communities.”
- **Facilitator Note:** Emphasize *comfort* + *options*.

Scenario C – Anger

- **User:** “My boss keeps piling on work and doesn’t appreciate anything I do!”
- **Chatbot:** “It sounds like you’re feeling overwhelmed and undervalued. That’s a tough situation. Sometimes expressing your concerns clearly can make a difference. Would you like me to help draft a professional message that communicates your workload and achievements?”
- **Facilitator Note:** Show *calm tone + practical guidance*.

Scenario D – Happiness

- **User:** “I just got promoted today!”
- **Chatbot:** “That’s fantastic news—congratulations! 🎉 You’ve clearly worked hard to earn this. How would you like to celebrate your success?”
- **Facilitator Note:** Demonstrate *celebration + encouragement*.

3. Audience Engagement

- **Prompt:** “Which response felt most natural to you? How did the chatbot’s tone shift across emotions?”
- **Facilitator Note:** Encourage participants to identify *keywords* (e.g., “discouraged,” “left out,” “undervalued,” “promoted”) that triggered tone changes.

4. Wrap-Up

- **Facilitator Note:** “This role-play shows how emotional AI can adapt responses to human feelings. The key is not just recognizing emotion, but responding with validation, empathy, and constructive options.”
- **Audience Prompt:** “Think of a situation where you’d want a chatbot to respond empathetically. How should it sound?”

Empathetic Chatbot in Action

Adapting Responses to Emotional Cues
